

**Abstract**

The invention relates to a corner guard (1) for box-type containers (4), such as cases, transport boxes and the like. The corner guard (1) comprises a caplike corner-protecting element (8) to be fitted externally over a container corner (2), at least one elastic intermediate corner element (10) for impact-absorbing arrangement between the corner-protecting element (8) and the container corner (2) being provided. Here, the corner-protecting element (8) is to be fastened to the container corner (2) in such a way that it is disconnected from the container (4) in terms of elastic impact absorption by way of the intermediate corner element (10).
